## Section 1 – Group Report

### 1. Introduction

#### 1.1 Project Overview

CheapDeals.com LTD is a UK-based retailer specializing in affordable mobile, tablet, and broadband deals. The company operates through physical stores and an online portal, with Customer Sales Representatives (CSRs) managing subscriptions via an automated Customer Relationship Management (CRM) system. However, outdated processes and rising competition have led to declining subscriptions and customer dissatisfaction.

To address these challenges, the company is investing in a mobile application to modernize its services and enhance the customer experience. This application will offer real-time customer support, self-service subscription management, and secure online transactions. With a £70,000 budget and a strict eight-month timeline, the goal is to smoothen business operations, reduce service costs and limitations, and provide an intuitive digital platform that improves customer engagement and retention.

#### 1.2 Vision statement

**For:**

- Customers range from young to elderly individuals aged 16 and 65 who seek mobile, tablet, and broadband deals with swift customer support and seamless transactions.
- Customer Sales Representatives (CSRs) who want a solution to take care of the customer's needs.
- Administrators who need to handle account privileges between the CSRs and the users.

**Who:**

- Want a customizable, easy-to-use online application to manage their accounts, simplify order operations, and increase customer satisfaction.

**The:**

- CheapDeals.com Mobile App.

**Is a:**

- Mobile application supported beyond Android 10 with an extensive CRM support system.

**That:**

Provide the Customer:

- A pleasant browsing experience with extensive customization, and reliable verification.
- Inquire about specific orders, detailed mailing, and payment of subscription packages through various methods in real-time at a discounted price on special occasions.
- If an order is processed through the app, customers can use special offer codes to enjoy buying more at a competitive price.

Provide the CSRs:

- A robust CRM system that offers personalized deals, and resolves customer queries instantly.

Provide the Admin:

- A set of tools to monitor account roles and the overall system's security.

**Unlike:**

- Traditional ordering processes through phone and face-to-face meetings, which consist of long wait times, indirect involvement, and inconsistent price updates.

**Our product:**

- Ensuring immediate access to package deals, automated customer support, and handles real-time payment and inquiries all in one app solution.

To redesign how CheapDeals.com communicates to its customers and improve the company's management infrastructure. Our vision offers a digital platform that is intuitive, accessible to various users, and allows them to browse, customize, and purchase different bundles with various secure payment methods. Furthermore, the system empowers the Customer Sales Representatives (CSRs) to handle customer demands efficiently, the CSRs can view statistics and make personal profiling that can help them make strategic operations to satisfy the customer further. Additionally, the system is oriented toward the Admin and helps them manage account privileges for security purposes and flexibility in management. By aiming toward what the customer cares about, the digital solution will improve management, build trust and brand reputation as well as solidify CheapDeals.com's competitive position in the market as the most popular affordable mobile, tablet and broadband deals.

## **2. Scrum Implementation**

### **2.1 Scrum Team Members and Roles**

The Team is formed by five members, which consist of 1 Scrum Master and 4 Developers. Every member has an impact on the success of the project:

1. [Han] - Scrum Master.
2. [Huy] - Developer.
3. [Minh] - Developer.
4. [Bao] - Developer.
5. [Bach] - Developer.

Adhering to the SCRUM framework, the team has been assembled accordingly and will follow the practices and principles:

- The Scrum Master will make sure that the team strictly follows the values of Scrum.
- The Development Team with their T-shaped skillsets with deep and broad areas of expertise is responsible for designing, developing, and ensuring that the user has a smooth experience.

- The Product Owner (Mr. Andrew Fowler) represents the stakeholder who provides the list of requirements and the functional aspects of the mobile app and the CRM system in the product backlog.
- The cross-functional team is effective for communication, self-organization as well as reacting to obstacles and challenges faced throughout the project.

## **2.2 Scrum Events**

Adhering to the backbone rule of adaptability and agility, The Scrum process is put into practice via 5 key events as a formal opportunity to constantly reflect and improve the artifacts of Scrum. These events promote transparency and regularity while minimizing complexity and the need for unaccounted meetings.

### **Sprint:**

These are continuous fixed-length events that contain all subsequent events to achieve the Product Goal, and can be viewed as a short project. Although with minor trade-offs, research has shown that faster cycles of projecting leads to cheaper cost and higher performance [\[link\]](#). Scrum Sprints also allow the product backlog to be refined and scope be negotiated as needed, enabling flexibility.

### **Sprint Planning:**

The entire Scrum team collaboratively plans and lays out the roadmap of work ahead, discussing the important Product Backlog and their contribution towards Product Goal. This event embodies the collective commitment and transparency through shared understanding of the team that can result in an effective team performance [\[link\]](#).

### **Daily Scrum**

These are 15-minute time-boxed events for the Developers Team to collectively inspect progress and provide daily touchpoints for real-time course correction. These meetings are short, kept daily and less formal than usual long-form meetings to enable efficiency and facilitate constant communication [\[link\]](#). The Scrums should focus on progressing towards the Sprint Goal and identifying/correct impediments.

### **Sprint Review:**

An external inspection of a sprint's result and decision for future adaptations, where the Scrum team demonstrates prototypes and completed works to stakeholders for feedback. This event is placed second-to-last of a sprint and is timeboxed for a maximum 4 hours of meeting for a one-month Sprint. Transparency with stakeholders is ensured via the feedback loop of this event.

### **Sprint Retrospective:**

An internal meeting to examine the team performance during the Sprint with regards to individuals, processes and their Definition of Done, and identifying improvements for future Sprints. This event is a structured approach to learning and enhancing the team's dynamics and working methodology. It is timeboxed for a maximum 3 hours for a one-month Sprint, promotes continuous improvement and encourages the team's ability to evolve.

## **3. Product Backlog**

### **3.1 Turning Requirements into User Stories and Acceptance Criteria**

#### **Epic 1 (CD\_1): Customer registration and authentication**

| ID    | User Stories     | Description   |
|-------|------------------|---|
| CD_11 | Account creation | As an unregistered customer, I want to create a new account so that I can browse the application using my account.                        |
| CD_12 | Account login    | As a registered user, I want to login with my account so that I can access the application with it.                                       |
| CD_13 | Password reset   | As a registered user, I want to reset my password when i accidentally forget it, so that I can access to my account with the new password |
| CD_14 | Social login     | As a customer, I want to login using my social accounts so that I can save time instead of typing the username and password               |

*Table 1: User Stories broken down from Epic 1*

**ACCEPTANCE CRITERIA:**

**CD\_11: Account creation**

- There is a “create account” button
- Have a registration form with relevant details (name, email, address, phone number, credit card details,...)

- Based on the total accumulated points, the customer is assigned a loyalty rank (e.g., Silver, Gold, Platinum).
- The customer can view their current rank and progress toward the next rank in the loyalty section.
- A small percentage discount is automatically applied to each order based on the customer's current rank
- Customers may receive additional perks based on rank
- Rank upgrades happen automatically when the required point threshold is reached.

- Customers are notified by the app notification or email when their rank changes or when they unlock a new benefit.

**Epic 10 (CD\_10): Admin operation**

| ID    | User Stories            | Description  |
|-------|-------------------------|--|
| CD_39 | User account creation   | As an administrator, I want to create user account so that the employee can access to their account and do their work                      |
| CD_40 | User account management | As an administrator, I want to manage user accounts. so that I can control access and ensure users have the correct roles and permissions. |
| CD_41 | Content management      | As an administrator, I want to modify the application content so that I can manage what the user sees and interacts with                   |

*Table 10: User Stories broken down from Epic 10*

**Acceptance criteria**

**CD\_39: User account creation**

- There is a create user account section on the admin dashboard.
- There must be an account details form to fill in order to create account
- All fields must be validated before submission
- If failed to validate, display error message and highlight the wrong field
- Display message and update to user account list after successfully create account.

**CD\_40: User account management**

- There must be a user account list for administrator to choose and manage.
- Administrator must be able to gain access or permission to user account.
- Administrator must be able to deactivate or delete user account.
- If administrator decide to deactivate or delete user account, It must be a confirmation before proceeding.
- User account permission must be updated right after successful modification.

**CD\_41: Content management**

- Administrator must be able to view existing content (e.g., packages, descriptions, deals, banners).
- Administrator must be able to edit text, images, visibility status, and availability of content items.
- All modification must be validated before submission.
- If failed to submit, It must display error message.
- Any changes must reflect in customer-facing app in real time.

### 3.2 User Stories Prioritization

Prioritizing the defined user stories is the next critical step in the Agile development process, providing better understanding of the development pathway. This section documents the team's effort to do so utilizing the MoSCoW technique combined with the Value-Effort matrix. This process has helped the team to establish a logical guideline for the implementation pathway.

#### User Flow

In order to help the team understand the necessity of later-decided tasks, an user flow chart (Figure 1.) was created. This clearly identifies critical components for the later Minimum Viable Product.

Figure 1: Customer User Flow

### MoSCoW

As our user stories are broken down deep enough, a MoSCoW table was created, categorizing the user stories into different priority states. This helped the team gain insight into the need for each feature. A Value-Effort Matrix was chosen as an addition to the categorization of the MoSCoW technique, providing a complementary perspective by further evaluating each user story. This helped prioritizing the user stories in each category: focusing on big points (high value - high effort) and targeting quick wins (high value - low effort).

### Must Have (60% of User Stories)

These are non-negotiable requirements that are critical for the success of the project.

Without these, the system would fail to meet the business needs.

| ID    | User Stories        | Justification   | Business Value<br>(1-10) | Effort<br>(1-10) |
|-------|---------------------|---|--------------------------|------------------|
| CD_11 | Account creation    | Essential for customer identification and personalized experience | 7                        | 6                |
| CD_12 | Account login       | Core functionality for accessing personal accounts                | 7                        | 4                |
| CD_17 | Customer browsing   | Fundamental for customers to explore available products           | 10                       | 8                |
| CD_18 | View item           | Critical for informed purchasing decisions                        | 9                        | 6                |
| CD_22 | Inquiry and support | Essential for customer assistance and satisfaction                | 7                        | 9                |
| CD_24 | Add to cart         | Core e-commerce functionality                                     | 8                        | 4                |
| CD_25 | Manage cart item    | Basic cart management requirement                                 | 7                        | 5                |
| CD_26 | Review order        | Critical for order verification before payment                    | 7                        | 6                |
| CD_37 | Special offer code  | Enhances sales but not critical for basic operation               | 5                        | 7                |

|       |                         |   |    |   |
|-------|-------------------------|---|----|---|
| CD_31 | Pay with credit card    | Essential payment method for completing transactions  | 10 | 6 |
| CD_32 | Customer identification | Critical for CSR to provide personalized support      | 8  | 7 |
| CD_35 | Item access             | Necessary for CSRs to access product information      | 8  | 6 |
| CD_40 | User account management | Essential for administrators to control system access | 8  | 5 |
| CD_41 | Content management      | Critical for maintaining up-to-date information       | 9  | 7 |
| CD_27 | Order confirmation      | Essential for purchase verification                   | 7  | 3 |
| CD_34 | Customer support        | Critical for customer satisfaction and retention      | 9  | 8 |
| CD_21 | Package customize       | Essential for personalized offerings                  | 9  | 6 |
| CD_15 | Account details         | Necessary for users to verify their information       | 5  | 5 |

Table 11: MoSCoW must have list

### Should Have (25% of User Stories)

Desirable features that would enhance the user experience but are not essential.

| ID    | User Stories    | Justification   | Business Value (1-10) | Effort (1-10) |
|-------|-----------------|---|-----------------------|---------------|
| CD_13 | Password reset  | Important for account security but has workarounds    | 5                     | 4             |
| CD_14 | Social login    | Enhances user experience but traditional login exists | 3                     | 6             |
| CD_20 | Item Search     | Critical navigation feature                           | 8                     | 7             |
| CD_16 | Password change | Enhances security but not immediately critical        | 3                     | 4             |

|       |                              |   |   |   |
|-------|------------------------------|---|---|---|
| CD_28 | Order tracking               | Valuable for customer experience but not essential for MVP      | 7 | 7 |
| CD_29 | Order history                | Important for reference but not critical for operations         | 6 | 5 |
| CD_33 | Customer account creation    | Important CSR function but can be managed differently initially | 3 | 4 |
| CD_36 | Profile customers for offers | Valuable for targeted marketing but can be implemented later    | 7 | 8 |
| CD_30 | Receive order receipt        | Legal requirement for transaction confirmation                  | 5 | 2 |

*Table 12: MoSCoW should have list*

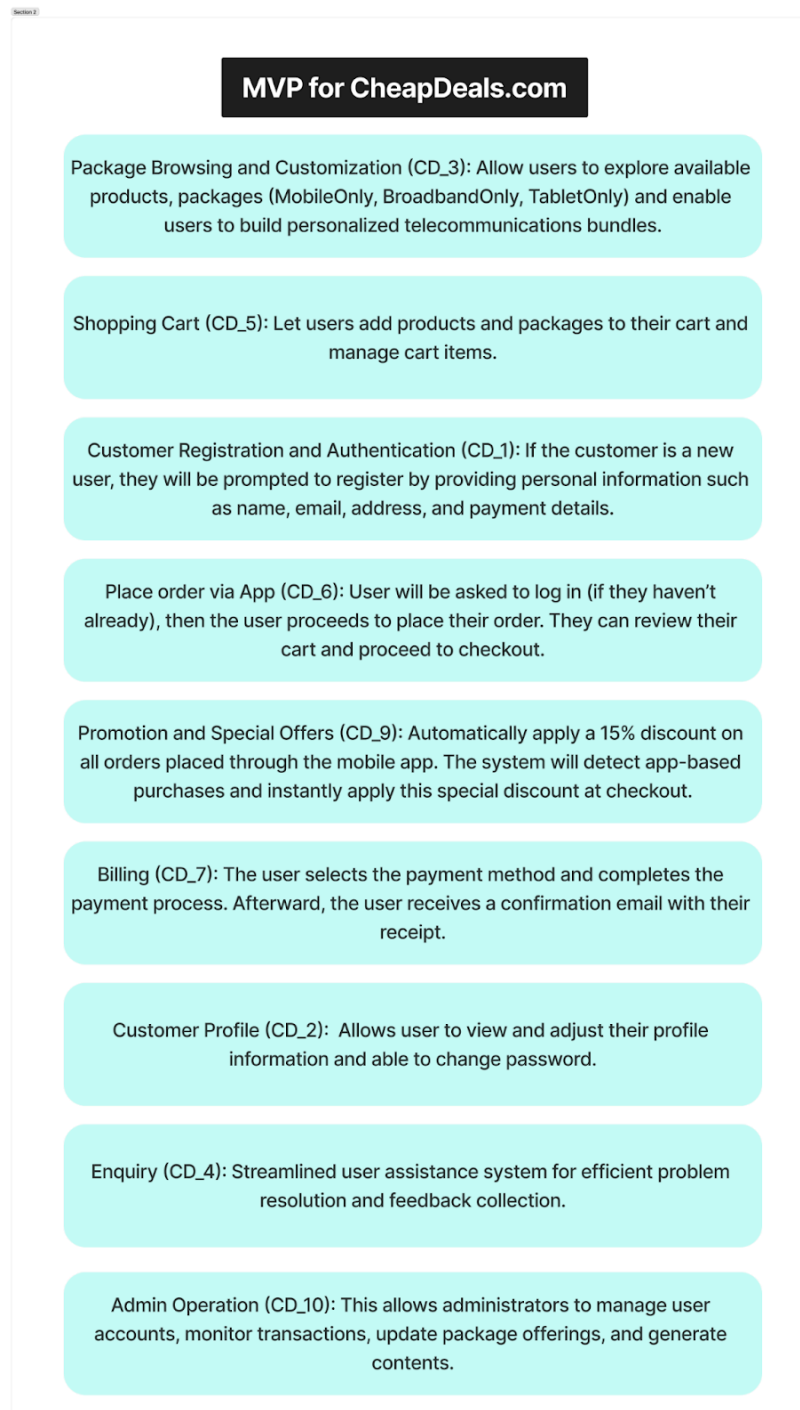

**Could Have (15% of User Stories)**

Desirable features that would enhance the user experience but are not essential.

| ID    | User Stories          | Justification  | Business Value<br>(1-10) | Effort<br>(1-10) |
|-------|-----------------------|--|--------------------------|------------------|
| CD_19 | Item feedback         | Enhances user engagement but not core functionality              | 5                        | 7                |
| CD_23 | FAQ                   | Helpful but live support covers immediate needs                  | 2                        | 2                |
| CD_38 | Loyalty points        | Enhances customer retention but not essential for initial launch | 4                        | 8                |
| CD_39 | User account creation | Administrative convenience but workarounds exist                 | 5                        | 5                |

*Table 13: MoSCoW could have list*

### 3.3 Minimum Viable Product

*Figure 2: Minimum Viable Product for CheapDeals*

### Minimum Viable Product Use-case Diagram

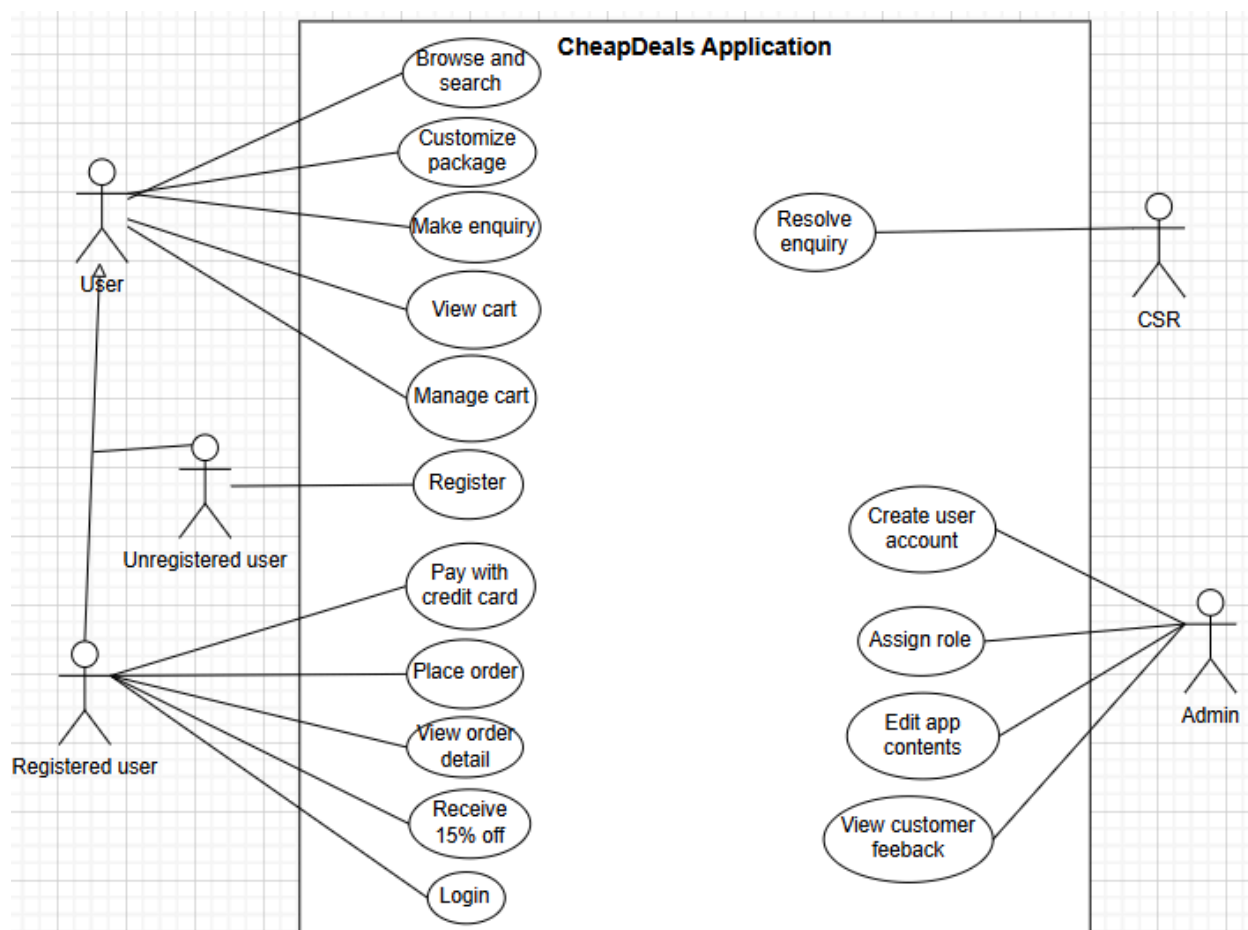

Figure 3: MVP Use-case Diagram

### 3.4 Planning Poker

| ID    | User Stories      | Huy | Bach | Minh | Bao | Final estimation |
|-------|-------------------|-----|------|------|-----|------------------|
| CD_11 | Account creation  | 2   | 3    | 3    | 2   | 2                |
| CD_12 | Account login     | 0   | 0    | 0    | 0.5 | 0                |
| CD_13 | Password reset    | 1   | 1    | 1    | 1   | 1                |
| CD_14 | Social login      | 1   | 1    | 1    | 0.5 | 1                |
| CD_15 | Account details   | 0   | 1    | 1    | 0.5 | 0.5              |
| CD_16 | Password change   | 0   | 0.5  | 0    | 0   | 0                |
| CD_17 | Customer browsing | 8   | 8    | 8    | 8   | 8                |
| CD_18 | View item         | 3   | 3    | 3    | 5   | 3                |
| CD_19 | Item feedback     | 5   | 3    | 5    | 3   | 5                |
| CD_20 | Item search       | 5   | 3    | 3    | 8   | 3                |

|                    |                              |    |     |     |     |      |
|--------------------|------------------------------|----|-----|-----|-----|------|
| CD_21              | Package customize            | 3  | 3   | 3   | 5   | 3    |
| CD_22              | Inquiry and support          | 13 | 5   | 8   | 5   | 8    |
| CD_23              | FAQ                          | 1  | 0.5 | 0   | 0   | 0    |
| CD_24              | Add to cart                  | 5  | 5   | 5   | 3   | 5    |
| CD_25              | Manage cart item             | 1  | 0.5 | 0   | 0.5 | 0.5  |
| CD_26              | Review order                 | 5  | 5   | 3   | 3   | 3    |
| CD_27              | Order confirmation           | 1  | 1   | 1   | 0.5 | 1    |
| CD_28              | Order tracking               | 3  | 1   | 2   | 3   | 2    |
| CD_29              | Order history                | 1  | 2   | 3   | 5   | 1    |
| CD_30              | Receive order receipt        | 3  | 0.5 | 0   | 0.5 | 0    |
| CD_31              | Pay with credit card         | 1  | 0.5 | 1   | 0.5 | 0.5  |
| CD_32              | Customer identification      | 3  | 8   | 1   | 1   | 3    |
| CD_33              | Customer account creation    | 2  | 1   | 1   | 1   | 1    |
| CD_34              | Customer support             | 5  | 3   | 0.5 | 5   | 5    |
| CD_35              | Item access                  | 2  | 5   | 5   | 3   | 3    |
| CD_36              | Profile Customers for Offers | 5  | 8   | 8   | 5   | 5    |
| CD_37              | Special offer code           | 3  | 3   | 5   | 5   | 3    |
| CD_38              | Loyalty points               | 8  | 3   | 8   | 5   | 5    |
| CD_39              | User account creation        | 1  | 1   | 3   | 3   | 1    |
| CD_40              | User account management      | 2  | 1   | 3   | 3   | 1    |
| CD_41              | Content management           | 5  | 5   | 8   | 3   | 3    |
| Total Story Points |                              |    |     |     |     | 77.5 |

Table 14: Planning Poker Estimation

**Planning Poker discussion**

By discussing outliers, the team members can quickly determine the practicality of each User Story and come to terms with each other during the sprint:

| ID                         | Outlier reasoning   | Final Estimation Justification  |
|----------------------------|---|---|
| CD_18: View Item           | Bao said, “It is a 5 because there could be multiple views and we’re developing a mobile application that needs to be flexible in terms of scaling for phones, tablets, and other devices”. | The estimation of 3 is moderate due to responsive and scalable resolution for different devices. However, the team acknowledges this is relatively easy to follow once the base view is created |
| CD_22: Inquiry and support | Huy and Minh said that this user story will need to be  | The estimation of 8 is a significant complexity since it  |

|                                |  |  |
|--------------------------------|--|--|
|                                | analyzed with the existing system or decide to separate the system or integrate it so it should be 8.  | requires assessing and evaluating the impact directly on the customer.   |
| CD_32: Customer identification | Bach estimated 5 because many verification steps needed to be considered to protect the customer's information.  | The final estimation is 3 after the team has clarified that they only need basic role-based security and account verification through email and further security is sufficient |
| CD_38:Loyalty point            | There were variances between Bach and Huy, while Bach estimated 3. Huy explained that many complex components need to be considered like how the system updates when an order is completed and its calculation rules | The final estimation of 5 reflects the difficulty. However, this feature can be implemented incrementally in a later sprint based on the feedback                              |

*Table 15: Planning Poker Estimation Justification*

## 4. Sprint One

### 4.1 Sprint Planning and Sprint Backlog

#### 4.1.1 Sprint Goal

The initial sprint goal is to deliver the core functionalities of a mobile app to the Admins and Customers and accompany the CSRs with basic features.

For the customer:

- A user-friendly, secure customer registration and login process with the ability to manage personal information (CD\_11, CD\_12, CD\_15).
- A smooth package browsing with detailed viewing information and inquiry support (CD\_17, CD\_18, CD\_22).
- Adding and adjusting the quantity using the shopping cart with the option to review orders in the app (CD\_24, CD\_25, CD\_26).

- Payment is processed through a credit card and the customer will receive detailed billing receipts (CD\_30, CD\_31).
- Loyalty Points (CD\_38)

For the Admin:

- Create user account and manage contents of the app (CD\_39, CD\_41).

For the CSRs

- Identify customer account by filling the form with provided information from them (CD\_32).
- Accessing, querying all items for the customer support (CD\_35).

#### 4.1.2 Sprint Duration

- Start Date March 3rd, 2025
- Due Date: March 17th, 2025
- Duration 12 working days (2 weeks including Saturday)

#### 4.1.3 Scrum Team Capacity

| Team member | Availability (Hours) | Individual Capacities |
|-------------|----------------------|-----------------------|
| Bach        | 60                   | 50                    |
| Minh        | 70                   | 65                    |
| Han         | 70                   | 63                    |
| Bao         | 60                   | 55                    |
| Huy         | 80                   | 77                    |

*Table 16: Scrum team capacity in Hours*

#### 4.1.4 Definition of Done

The following checklist summarizes the Definition of Done (DoD) criteria to ensure a high-quality and stable Android application build for Sprint 1:

- All the user stories and acceptance criteria from requirements in sprint 1 are implemented and functional on Android 10 and above.
- Dependencies are up-to-date and free of known critical vulnerabilities.

- UI design aligns the guidelines are consistent and responsive across different screen sizes and resolution
- All user interactions (buttons, swipe,..) are functional and smooth
- Code has no significant issues, code smells, or anti-patterns identified by tools
- No crashes detected under normal or edge-case scenarios
- Unit tests are written with at least 75% code coverage
- Crashlytics integrated and debugged logging output appropriately.
- Proper loading states and error states are displayed
- API calls are implemented with adequate success and error handling
- App builds successfully without runtime errors and passes CI/CD pipeline checks
- Necessary API documentation updated.
- Sensitive information is not exposed in source control, configuration files, or logs.
- Display user-friendly error message for invalid login attempts or incorrect credentials input.

#### 4.1.5 Sprint Backlog

*Figure 4: Sprint 1 Backlog using Jira*

#### 4.1.6 Task Assignment

Even though, most Agile implementation try to advise against clearly assigning tasks on the sprint planning phase, as it could lead to the decrease in team responsibility [[link](#)], the team has decided that the first Sprint should require a task assignment breakdown in the planning phase as the team has not fully grasped the working velocity of themselves and the team. This can also build the team's personal responsibility and trust for one another's potential.

| User Story               | Story Points | Member Contribution |
|--------------------------|--------------|---------------------|
| CD_11 - Account Creation | 2            | Minh                |

|                                 |     |      |
|---------------------------------|-----|------|
| CD_12 - Account Login           | 0   | Minh |
| CD_15 - Account Details         | 1   | Huy  |
| CD_17 - Customer Browsing       | 8   | Bao  |
| CD_18 - View Item               | 3   | Bao  |
| CD_22 - Inquiry and Support     | 8   | Bach |
| CD_24 - Add to Cart             | 5   | Huy  |
| CD_25 - Manage Cart Item        | 0.5 | Huy  |
| CD_26 - Review Order            | 3   | Bach |
| CD_30 – Receive Order Receipt   | 0   | Bao  |
| CD_31 - Pay with Credit Card    | 1   | Bao  |
| CD_32 - Customer Identification | 3   | Minh |
| CD_35 - Item Access             | 3   | Minh |
| CD_39 - User Account Management | 1   | Huy  |
| CD_41 - Content Management      | 3   | Bach |

*Table 17: Sprint 1 Task Assignment*

#### **4.1.7 Breakdown User Stories included in the Sprint Backlog in Tasks**

## 4.2 Sprint Cycle

### 4.2.1 Use-Case Diagram

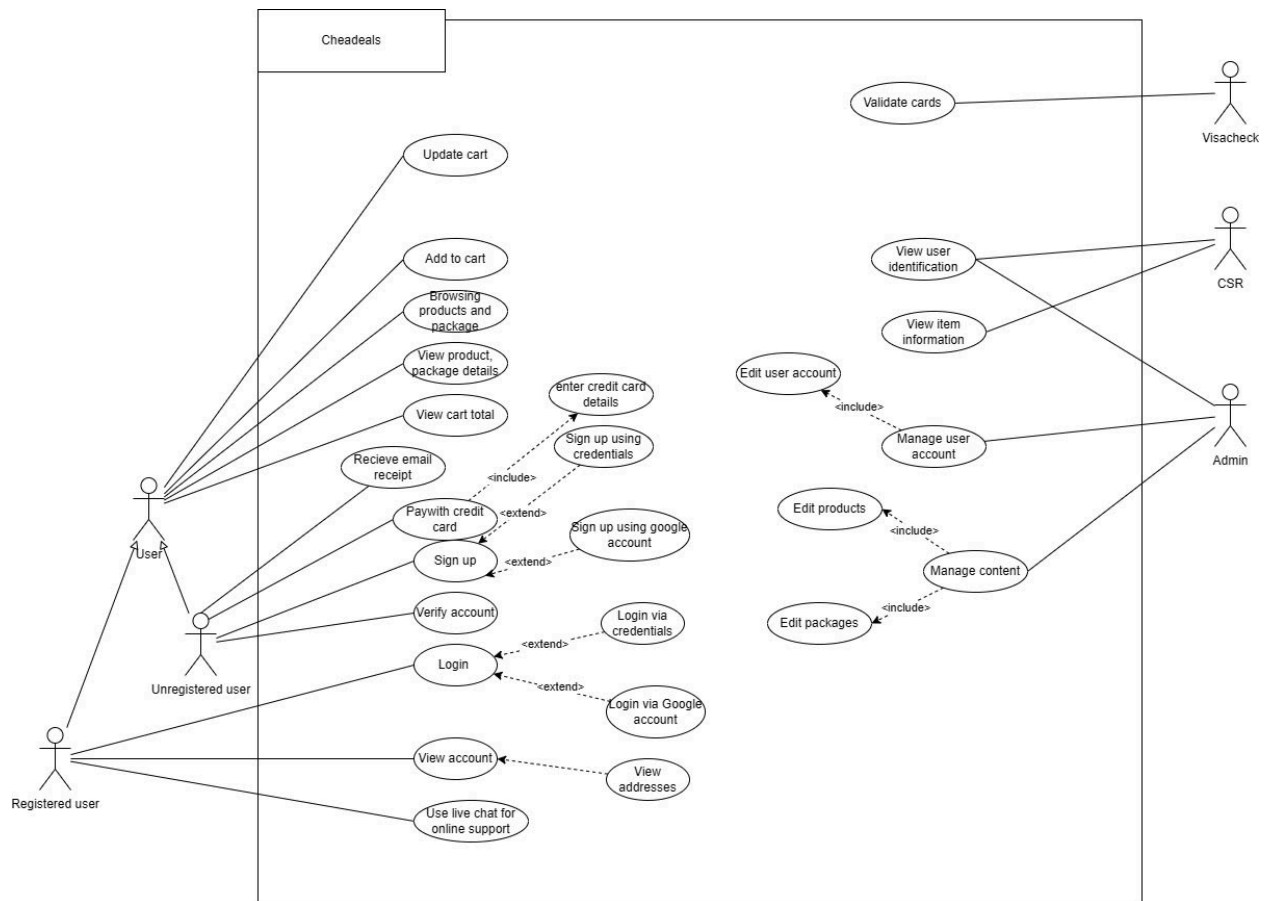

Figure 5: Sprint 1 Use-case Diagram

#### Scenario: Customer Shopping and Payment flow

|                       |  |                 |
|-----------------------|--|-----------------|
| <b>Use case name</b>  | Customer use case for Sprint 1   |                 |
| <b>Actors</b>         | Customer   |                 |
| <b>Description</b>    | The user registration process enables customers to fill in personal information and verify their account through this use case. Users must first register before they can access the product and package viewing features through login. The system enables customers to add items to their cart and view the total cost while allowing them to update their cart contents before paying with a credit card. |                 |
| <b>Typical Course</b> | Actor Action   | System Response |

|   |   |   |
|---|---|---|
| <p><b>Sign Up, Login</b></p>  | <p><u>Step 1:</u> The user fills in personal information and clicks the “Sign Up” button to register</p> <p><u>Step 3:</u> The system activates an email API to deliver confirmation emails after successful registration.</p> <p><u>Step 5:</u> The user navigates to the login page.</p> <p><u>Step 7:</u> The user completes the form and clicks the “Sign In” button.</p>           | <p><u>Step 2:</u> The system verifies all entered data before transmitting it to backend storage systems.</p> <p><u>Step 4:</u> The system displays a notice “You have activated your account, please login to continue”.</p> <p>Step 6: The system displays a form for “Email or Username” and “Password”.</p> <p><u>Step 8:</u>The system validates all the input and navigates user to Homepage</p>      |
| <p><b>View Account</b></p>  | <p><u>Step 1:</u> The customer accesses the system and clicks on the “Profile” icon.</p> <p><u>Step 3:</u> The customer can view their account information.</p>   | <p><u>Step 2:</u> The system transfers the customer to the profile page.</p> <p><u>Step 4:</u> The system displays the customer information.</p>  |
| <p><b>Browsing products and packages</b></p> <p><b>View Product</b></p> <p><b>Package details (Guest)</b></p> | <p><u>Step 1:</u> The user accesses the system and can browse products, packages without having an account.</p> <p><u>Step 3:</u> The user clicks on a product and navigates to the product details page.</p>   | <p><u>Step 2:</u> The system displays the lists of all available products and packages.</p> <p><u>Step 4:</u> The system displays the product details.</p>  |
| <p><b>Add to cart</b></p> <p><b>Manage cart item (Guest)</b></p>  | <p><u>Step 1:</u> The user can add a product to their cart after exploring and satisfied.</p> <p><u>Step 3:</u> The user clicks on the “Cart” icon on the right corner to view their cart.</p> <p><u>Step 5:</u> The user is able to manage their cart by adjusting the quantity and deleting the product.</p> <p><u>Step 7:</u> The user makes payment by clicking “Checkout Now”.</p> | <p><u>Step 2:</u> The system displays a notice after the user adds a product to cart.</p> <p><u>Step 4:</u> The system displays all the products that the user has added.</p> <p><u>Step 6:</u> The system displays a notice after the user updates the items.</p> <p><u>Step 8:</u> The system validates if the user has logged in yet, if not the system transfers the user to the registration page.</p> |

|  |   |  |
|--|---|--|
| <p>Pay with credit card</p> <p>Receive order receipt</p> | <p><u>Step 1:</u> If the customer logged in, the customer accesses the payment page.</p> <p><u>Step 3:</u> The customer inputs information and clicks “Complete Payment”.</p> <p><u>Step 5:</u> After checking out successfully, the customer receives an email receipt.</p>  | <p><u>Step 2:</u> The system displays customer address information and payment method and additional information.</p> <p><u>Step 4:</u> The VISAccheck system validates card information to verify if it is corrected.</p> <p><u>Step 5:</u> The system provides an receipt through customer’s email</p> |
| <p>Inquiry and Support</p>                               |   |  |
| <p>Alternative Course</p>                                | <p><b>1. Sign Up, Login</b></p> <p><u>Sign Up (Registration):</u></p> <ul style="list-style-type: none"> <li>- Username exists: <i>"A user with that username already exists."</i></li> <li>- Email exists: <i>"This email address is already registered."</i></li> <li>- Passwords don't match: <i>"The two password fields didn't match."</i></li> <li>- If password doesn't meet complexity rules: <i>"This password is too common.", "This password is too short."</i></li> <li>- Other validation errors: <i>"Please correct the errors below."</i></li> <li>- On success (before email verification): <i>"Registration successful! Please check your email to verify your account."</i></li> <li>- If email fails: <i>"Failed to send verification email. Please try again later or contact support."</i></li> </ul> <p><u>Login:</u></p> <ul style="list-style-type: none"> <li>- Invalid credentials: <i>"Invalid username or password."</i></li> <li>- Inactive account: <i>"Your account is inactive. Please check your email for the verification link or contact support."</i></li> <li>- Too many failed attempts: Either a generic invalid message or <i>"Too many failed login attempts."</i></li> </ul> <p><b>2. View Account (Guest)</b></p> <ul style="list-style-type: none"> <li>- Guests can't access account pages, the system redirects to the login page with message: <i>"Please log in to access this page."</i></li> </ul> <p><b>3. Browsing products and packages, View product, package details (Guest)</b></p> <ul style="list-style-type: none"> <li>- If inactive/deleted item URL: <i>"Product not found."</i> (Standard 404 error), or redirects to the main product/package list page.</li> <li>- Guests can browse active items</li> </ul> <p><b>4. Add to cart, Manage cart item (Guest)</b></p> <ul style="list-style-type: none"> <li>- Guest carts are usually handled via sessions.</li> </ul> |  |

|                      |  |
|----------------------|--|
|                      | <p><u>Adding to Cart:</u></p> <ul style="list-style-type: none"> <li>- Exceeds stock: <i>"Quantity exceeds available stock for [Product Name]." / "Cannot add more [Product Name] to cart. Only [Stock Quantity] available."</i></li> <li>- Inactive product: <i>"This product is currently unavailable."</i></li> <li>- Success: <i>"Added [Product Name] to cart."</i></li> </ul> <p><u>Managing Cart:</u></p> <ul style="list-style-type: none"> <li>- Exceeds stock: <i>"Cannot update quantity. Only [Stock Quantity] available."</i></li> <li>- Expired session: Cart appears empty, no message.</li> </ul> <p><b>5. Pay with credit card, receive email receipt (Guest)</b></p> <ul style="list-style-type: none"> <li>- Most e-commerce sites require login or a guest checkout process where an email is mandatory.</li> <li>- If guest tries to checkout: <i>"Please log in or register to continue checkout."</i></li> <li>- Usually redirected to login/signup page OR prompted for email/shipping details for guest checkout.</li> <li>- During Guest Checkout:</li> <li>- If no email: <i>"Email address is required to complete the order."</i></li> <li>- Payment issues: <i>"Invalid card selected.", "Please fill in all card details."</i></li> </ul> <p><u>Email Receipt:</u></p> <ul style="list-style-type: none"> <li>- If email sending fails: (The user won't see an error, but the receipt won't arrive. This is a backend issue)</li> </ul> |
| <b>Precondition</b>  | <ul style="list-style-type: none"> <li>- The user or guest has a stable internet connection to access the app.</li> <li>- The user or guest accessed the system and browsed or viewed item details.</li> <li>- The user or guest views available products or packages and adds to cart, managing cart items.</li> <li>- The customer must be logged in to make payment.</li> </ul>   |
| <b>Postcondition</b> | <ul style="list-style-type: none"> <li>- The customer's information is saved, and receives a confirmation email.</li> <li>- The customer's cart is saved, and adjusted based on the user's need.</li> <li>- The customer receives an email receipt after check out.</li> </ul>   |
| <b>Assumptions</b>   | <ul style="list-style-type: none"> <li>- The customer provides correct data which gets stored in the database.</li> </ul>  |

|  |   |
|--|---|
|  | <ul style="list-style-type: none"> <li>- All product and package details are up-to-date.</li> <li>- The system enables immediate access to package data without any waiting time.</li> <li>- The system automatically adjusts prices, quantity according to customer choices in real-time.</li> </ul> |
|--|---|

Table 18: Customer use-case diagram scenario

**Scenario: Admin and CSR interaction flow**

| Use case name  | Admin and CSR interaction  |   |
|--|--|---|
| Actors   | Admin, CSR   |   |
| Description  | The use case grants administrator full control to manage item content alongside user account management and enable CSRs to view user identification and item information |   |
| Typical Course   | Actor Action   | System Response   |
| <b>Manage User Account (Admins)</b>  | Step 1: Admin clicks on the “Users” option from the admin dashboard.<br>Step 3: Admin selects a specific customer to edit profile.                                       | Step 2: The system displays a list of existing accounts with options to add, edit, view, or delete account.<br>Step 4: The system transfers admin to the selected action. |
|  <b>Edit User</b> | Step 1: Admin selects an account to adjust the account information, role and clicks “Update User”.   | Step 2: The system validates new adjusted information and updates the account in the database, saving the changes.  |
| <b>Content Management (Admin)</b>  | Step 1: Admin selects any content to edit (eg.,”Products , Packages”   | Step 2: The system transfers admin to the selected action.  |
|  <b>Products</b>  | Step 1: Admin selects the “Edit” option to adjust the product.<br>Step 3: Admin fills in the new information and clicks “Update Product”.                                | Step 2: The system displays the product information to adjust.<br>Step 4: The system validates new adjust information and update in the database, saving the changes      |
|  <b>Packages</b>  | Step 1: Admin selects the “Edit” option to adjust the package.   | Step 2: The system displays the package information to adjust.  |

|  |  |   |
|--|--|---|
|  | Step 6: Admin fills in the new information and clicks “Update Package”.  | Step 7: The system validates new adjust information and update in the database, saving the changes.   |
| <b>Customer Identification (CSR Phone Order)</b> | Step 1: CSR verifies the customer through the information the customer provides when receiving the call.   | Step 2: The system displays the customer information through the CRM system dashboard (eg., “User profile”, “Shipping Address”, “User order information”. |
| <b>Item Access (CSR Management)</b>              | Step 1: CSR accesses the CRM system and clicks on “Products  | Step 2: The system displays the product full information for the CSR to manage.   |
| <b>Alternative Course</b>                        | <p><b>1. Manage User Account (Admin) - Edit User</b></p> <p><u>Saving Edit User Form:</u></p> <ul style="list-style-type: none"> <li>- Form validation errors: (Standard form validation errors are displayed next to the fields).</li> <li>- Success: “User “[username]” updated successfully with [Role Name] role.”</li> </ul> <p><u>Resetting Password:</u></p> <ul style="list-style-type: none"> <li>- Passwords don’t match: “The two password fields didn’t match.”</li> <li>- Invalid password: “Password validation errors”</li> <li>- Success: “Password for “[username]” has been reset successfully.”</li> </ul> <p><u>Deleting User:</u></p> <ul style="list-style-type: none"> <li>- Confirm: “Are you sure you want to delete the user '[username]’?”</li> <li>- Success: “User “[username]” deleted successfully.”</li> </ul> <p><b>2. Content Management (Admin) - Products</b></p> <p><u>Listing Products:</u></p> <ul style="list-style-type: none"> <li>- No products found: “No products found matching your criteria.”</li> </ul> <p><u>Creating/Editing Product:</u></p> <ul style="list-style-type: none"> <li>- Form validation errors(e.g., non-numeric price, missing name, invalid category, image upload error): “Please correct the errors below.”</li> <li>- Save errors: “Error creating product: [Error details]” / “Error updating product: [Error details]”</li> </ul> |   |

- Success: *"Product "[Product Name]" created successfully. / Product "[Product Name]" updated successfully."*

Deleting Product:

- *"Are you sure you want to delete the product '[Product Name]'?"*
- Success: *"Product "[Product Name]" deleted successfully."*

### **3. Content Management (Admin) - Packages**

Listing Packages:

- No packages found: *"No packages found matching your criteria."*

Creating/Editing Package:

- Form validation errors: (e.g., non-numeric prices, missing name, discount price > original price, minimum purchase invalid): *"Please correct the errors below."*
- No products: *"Please add at least one product to the package."*
- Duplicate products: *"Cannot add the same product multiple times."*
- Save errors: *"Error creating package: [Error details]" / "Error updating package: [Error details]"*
- Success: *"Package "[Package Name]" created successfully. / Package "[Package Name]" updated successfully."*

Deleting Package:

- *"Are you sure you want to delete the package '[Package Name]'?"*
- Success: Package: *"[Package Name]" deleted successfully."*

### **4. Customer Identification (CRM Phone Order)**

- The CRM doesn't appear to have a dedicated "phone order" flow where customer identification by phone is the primary step.
- CRM User Search: When searching for users in the CRM list:
- No users found: *"No users found matching '[search term]'."*
- CRM Add User: (See "Create New User" from earlier) checks by username/email

### **5. Item Access (CRM Management)**

- Access Denied (CRM views): *"You do not have access to this area. (Redirects away from CRM)"*
- CRM login restriction: *"You don't have permission to access the CRM system."*

|                      |   |
|----------------------|---|
|                      | <p><u>Viewing Item Lists (Products, Packages, Orders):</u></p> <ul style="list-style-type: none"> <li>- Search fields have no results: <i>"No products found." / "No packages found." / "No orders found."</i></li> </ul> <p><u>Viewing Item Details:</u></p> <ul style="list-style-type: none"> <li>- Invalid item ID: <i>"Not Found"</i></li> </ul> <p><b>6. Alternative Course (General Admin/CRM)</b></p> <ul style="list-style-type: none"> <li>- Invalid Date Format (e.g., in Order filters): <i>"Invalid date format. Please use YYYY-MM-DD."</i></li> <li>- Missing Profile: <i>"User profile not found."</i> (or profile is auto-created)</li> <li>- Generic Errors: <i>"An error occurred. Please try again."</i></li> </ul> |
| <b>Precondition</b>  | <ul style="list-style-type: none"> <li>- The admin is logged in and has the permissions to manage user accounts and manage content.</li> <li>- The CSR is logged in and has the permissions to identify customer and item access.</li> </ul>  |
| <b>Postcondition</b> | <ul style="list-style-type: none"> <li>- The account is successfully edited, in the system.</li> <li>- The content is successfully edited, in the system.</li> </ul>  |
| <b>Assumptions</b>   | <ul style="list-style-type: none"> <li>- The system implements role-based permissions which restrict these actions to admins and CSRs.</li> <li>- The system validates all input fields before allowing either saving or deleting operations.</li> </ul>  |

### 4.2.4 Burndown Charts

*Figure : Sprint 1 Burndown Chart*

### 4.2.5 Sprint Review

Ending the initial sprint, a sprint review is carried out with the product owner and the stakeholders from the marketing, sales, and customer support departments to discuss the feedback on what features and proposals were implemented below.

#### **Meeting note:**

#### What was done:

- Customers can browse freely and view packages available for each device such as CustomersaleOnly, Broadband Only, or Tablet only.

- Customers can store personal information like name, phone number, address, credit card information, and email.
- Any information that is not valid will display a red error message that notifies the user to adjust the information.
- Upon a successful account creation, there will be a confirmation email sent to the customer to activate their account.
- The CSRs can Identify the customer and assist them through the live chat.

What was not done:

- Loyalty point is not fully implemented and suffered minor bugs that may affect the user's general experience.

Feedback:

Valuable feedback has been given by the stakeholders to evaluate sprint one. They expressed that the core functionalities have been delivered adequately, emphasizing the ease of use in the package browsing experience. Furthermore, they have suggested finding bottlenecks in the system to improve latency on low-performing devices and try to estimate tasks more realistically in each sprint. The development team will consider the suggestion in the next sprint.

From all of the stakeholders involved in the project have agreed that Sprint 1 is completed with minor negligible issue that can be improved in the next sprint.

#### **4.2.6 Sprint Retrospective**

Concluding the sprint, team members have gathered around to reflect on what can be improved after the initial sprint, gather feedback, and make actionable outcomes for continuous improvement indicated in the following table:

Attendees: Bao, Huy, Han, Bach, Minh

| Agenda                        | What went well?  | What can be improved?  | Action to improve in the next sprint  |
|-------------------------------|--|--|---|
| Scrum meeting                 | Everyone is present in every scrum meeting                                       | During scrum meetings, team members usually get sidetracked by other task                                    | Set clear goals before the meeting and initiate a small agenda(set of questions) for daily stand-ups                    |
| Loyalty points implementation | Almost all of the features promised in sprint 1 is implemented                   | Due to miscalculations, the Loyalty point system is not fully implemented in sprint 1                        | Set realistic tasks and days before the end of the sprint for unexpected technical challenges                           |
| Peer Collaboration            | Team members collaborated effectively and overcome blockers throughout the sprin | Communication across sub-task was not apparent which lead to overlapping work                                | Defining clear individual ownership one task at a time and encourage frequent checkups to update                        |
| Documentation                 | Notification of changes are were delivered to the team member quickly,           | Some update entries lacked context which lead to more misunderstanding that is clarified in the next meeting | Encourage team member to collaborate more and keep information centralized in a separate file dedicated for all changes |

Table 20: Sprint 1 Retrospective

### Discussion:

Agenda:

*What aspect of the sprint went well?*

- Collaborating within the team yielded tangible results and communicating with the team allowed us to address and handle issues quickly.
- During daily scrum sessions, any unexpected issues were notified to the team member and they can work on it as soon as possible.

### Team member conversation:

Minh: Every team member faced the challenge head-on with courage and was not afraid to try different methods to catch up with the schedule.

Huy: The team members are willing to take up each other's work when some of them are not available. Being adaptive has helped the team make a thorough review and move forward together.

Bach: Setting up goals only addresses one part of the problem the team lacked when coordinating with each other. To prevent miscalculations and delays, the team should pay attention more to setting individual responsibilities, and make sure everyone is up to date with the sprint objectives and documentation.

Bao: Utilizing the unit test as soon as possible can help minimize cognitive overload, and help the team operate smoothly and isolate components of the code incrementally rather than debugging the entire system all at once.

**Overall Reflection:**

While the sprint demonstrated our ability to adapt and be flexible, and clear with communication and support each other, it also revealed the need for better initial planning precautions and managing realistic expectations. Moving forward we will fully implement what is left from Sprint 1 as well as improve the system further entering Sprint 2.

## 5. Sprint Two

### 5.1 Sprint Planning and Sprint Backlog

#### 5.1.1 Sprint Goal

The second sprint will target improved user experience through enhanced account management capabilities and shopping features which include post-purchase improvements and it will advance internal CSR and Admin operational tools.

For the customer:

- Providing reset passwords for the customer. (CD\_13)
- Enable password changes. (CD\_16)
- Search available items to quickly find desired products. (CD\_20)
- Customize packages to meet personal needs and preferences. (CD\_21)
- Allow customers to give feedback and submit ratings for previously purchased items. (CD\_19)
- Track the progress of active orders and view their full order history. (CD\_28, CD\_29)
- Confirm orders and receive confirmation messages. (CD\_27)
- Loyalty Point (CD\_38)

For the Admin:

- Managing, assign role and permission for system user. (CD\_40)

For the CSRs:

- Create new customer accounts through the CRM system. (CD\_33)
- Support customers via real-time chat functionality. (CD\_34)
- Profile customers to offer targeted deals and packages. (CD\_36)

#### 5.1.2 Definition of Done

The following checklist summarizes the Definition of Done (DoD) criteria to ensure a high-quality and stable Android application build for Sprint 1:

- All the user stories and acceptance criteria from requirements in sprint 1 are implemented and functional on Android 10 and above.

- Dependencies are up-to-date and free of known critical vulnerabilities.
- UI design aligns the guidelines are consistent and responsive across different screen sizes and resolution
- All user interactions (buttons, swipe,..) are functional and smooth
- Code has no significant issues, code smells, or anti-patterns identified by tools
- No crashes detected under normal or edge-case scenarios
- Unit tests are written with at least 75% code coverage
- Crashlytics integrated and debugged logging output appropriately.
- Proper loading states and error states are displayed
- API calls are implemented with adequate success and error handling
- App builds successfully without runtime errors and passes CI/CD pipeline checks
- Necessary API documentation updated.
- Sensitive information is not exposed in source control, configuration files, or logs.
- Display user-friendly error message for invalid login attempts or incorrect credentials input.
